

## Key Vocabulary

|                |                                                                                                  |
|----------------|--------------------------------------------------------------------------------------------------|
| environment    | The area in which living things exist and live.                                                  |
| damage         | When a natural area has had things removed or is not as healthy as it was.                       |
| equipment      | Items that people use to help them complete tasks.                                               |
| global warming | The increase in the Earth's temperature caused by climate damage.                                |
| pollution      | Things that cause damage to the environment.                                                     |
| harm           | Damage that is caused, sometimes through pollution, that affects the quality of the environment. |
| forest         | A large wooded area with wide ranging areas of trees.                                            |

## Key Facts

- The rate of global warming has doubled in recent decades.
- The nine years from 2013 to 2021 rank within the hottest ten years on record.
- 88% of the sea's surface is polluted with plastic.

Drought

Plastic Pollution

## Key Questions

- What can we do to help reverse global warming?
- How can we keep ourselves safe in nature?
- How can we help reduce plastic pollution?

## Cross Curricular Learning

Geography - environment and pollution.

Science - animals and their habitats

## Learning Journey

### Forest survival

Exploring how to survive in a forest.

Understanding what is required to survive in a forest.

Explaining the importance of water to survival.

### Desert Island

To know what to do if I find myself in unfamiliar surroundings.

To know that it is important to keep my mind and body healthy.

### Protecting our Planet

To discuss and explain what Global Warming means.

To understand why the planet is getting warmer.

To discuss and explain ways of protecting the planet, and why this is important.

### Environment

To learn about what pollution is and how to prevent it.

To investigate recycling and know which materials can be recycled.

### Wildlife

To learn about dangerous wildlife in the UK.

To discuss what to do if bitten or stung by an animal or insect.

To learn about conservation and how to look after wildlife.
