

Science – Progression of Skills per Year Group

Children know about similarities and differences in relation to places, objects, materials and living things. They talk about the features of their own immediate environment and how environments might vary from one another. They make observations of animals and plants and explain why some things occur, and talk about changes.

Skills	EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Planning, Communication and Sources	Use natural curiosity to explore their surroundings. Talk about and draw simple images to convey meaning.	Draw simple pictures talk about what they see and do. Use simple charts to communicate findings. Identify key features ask questions.	Describe their observations using some scientific vocabulary. Use simple texts, directed by the teacher, to find information. Suggest how to find things out. Identify key features ask questions.	Use pictures, writing, diagrams and tables as directed by their teacher. Use a range of simple texts to find information. Record their observations in written, pictorial and diagrammatic forms. Select the appropriate format to record their observations.	Record observations, comparisons and measurements using tables and bar charts. Begin to plot points to form a simple graph. Use graphs to point out and interpret patterns in their data. Select information from a range of sources provided for them.	Record observations systematically. Use appropriate scientific language and conventions to communicate quantitative and qualitative data. Select a range of appropriate sources of information including books and the internet.	Choose scales for graphs which show data and features effectively. Identify measurements and observations which do not fit into the main pattern. Begin to explain anomalous data. Use appropriate ways to communicate quantitative data using scientific language.
Enquiring, Testing, Obtaining and Presenting Evidence	Look for similarities and differences in relation to objects, materials and living things and talk about what has been noticed.	Test ideas suggested to them. Say what they think will happen. Use first hand experiences to answer questions. Begin to compare some living things.	Use simple equipment provided to aid observation. Compare objects, living things or events. Make observations relevant to their task. Begin to recognise when a test or comparison is unfair. Use first hand experiences to answer questions.	Put forward own ideas about how to find the answers to questions. Recognise the need to collect data to answer questions. Carry out a fair test with support. Recognise and explain why it is a fair test with help. Begin to realise that scientific ideas are based on evidence.	Show in the way they perform their tasks how to vary one factor while keeping others the same. Decide on an appropriate approach in their own investigations to answer questions. Describe which factors they are varying and which will remain the same and say why.	Use previous knowledge and experience combined with experimental evidence to provide scientific explanations. Recognise the key factors to be considered in carrying out a fair test.	Describe evidence for a scientific idea. Use scientific knowledge to identify an approach for an investigation. Explain how the interpretation leads to new ideas.

Observing and Recording	Talk about the features of their own immediate environment and how environments might vary from one another.	Make observations using appropriate senses. Record observations. Communicate observations orally, in drawing, labelling, simple writing and/or using ICT.	Respond to and ask questions asked by the teacher. Collect and record data (supported by the teacher). Suggest how they could collect data to answer questions. Begin to select equipment from a limited range.	Make relevant observations. Measure using given equipment. Select equipment from a limited range.	Carry out measurements accurately. Make a series of observations, comparisons and measurements. Select and use suitable equipment. Make a series of observations and measurements adequate for the task.	Make a series of observations, comparisons and measurements with increasing precision. Select apparatus for a range of tasks. Plan to use apparatus effectively. Begin to make repeat observations and measurements systematically.	Measure quantities with precision using fine – scale divisions. Select and use information effectively. Make enough measurements or observations for the required task.
Considering Evidence and Evaluating	Make observations of animals and plants and explain why some things occur, and talk about changes.	Make simple comparisons and groupings. Say what has happened. Say whether what has happened was what they expected.	Say what has happened. Say what their observations show and whether it was what they expected. Begin to draw simple conclusions and explain what they did. Begin to suggest improvements in their work.	Begin to offer explanations for what they see and communicate in a scientific way what they have found out. Begin to identify patterns in recorded measurements. Suggest improvements in their work. Evaluate their findings.	Predict outcomes using previous experience and knowledge and compare with actual results. Begin to relate their conclusions to scientific knowledge and understanding. Suggest improvements in their work, giving reasons.	Make predictions based on their scientific knowledge and understanding. Draw conclusions that are consistent with the evidence. Relate evidence to scientific knowledge and understanding. Offer simple explanations for any differences in their results. Make practical suggestions about how their working methods could be improved.	Make reasoned suggestions on how to improve working methods. Show how interpretation of evidence leads to new ideas. Explain conclusions, showing understanding of scientific ideas.

Progression of Skills

EYFS
Early Learning Goals – Understanding the World
The Natural World - Explore the natural world around them, making observations and drawing pictures of animals and plants. - Know some similarities and differences between the natural world around them and contrasting environments, drawing on their experiences of what has been read in class. - Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter.

The National Curriculum statements in *italics* in the following table indicate that they feature more than once

Year 1 & 2	Year 3 & 4	Year 5 & 6
Asking questions and recognising that they can be answered in different ways		
Asking simple questions and recognising that they can be answered in different ways - While exploring the world, children develop their ability to ask questions (e.g. what something is, how things are similar/different, the ways things work, which alternative is better, how things change, how they happen). Where appropriate, they answer these questions. - Children answer questions developed with the teacher often through a scenario. - Children are involved in planning how to use resources provided to answer questions using different types of enquiry, helping to recognise that there are different ways in which questions can be answered.	Asking relevant questions and using different types of scientific enquiries to answer them - Children consider their prior knowledge when asking questions. They independently use a range of question stems. Where appropriate, they answer these questions. - Children answer questions posed by the teacher. - Given resources, children decide for themselves how to gather evidence to answer the question. They recognise when secondary sources can be used to answer questions that cannot be answered through practical work. They identify the type of enquiry that they have chosen to answer their question.	<i>Planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary</i> - Children independently ask scientific questions. This may be stimulated by a scientific experience or involve asking further questions based on their developed understanding following an enquiry. - Given a wide range of resources the children decide for themselves how to gather evidence to answer a scientific question. They choose a type of enquiry to carry out and justify their choice. They recognise how secondary sources can be used to answer questions that cannot be answered through practical work.

Year 1 & 2	Year 3 & 4	Year 5 & 6
Making observations and taking measurements		
Observing closely, using simple equipment - Children explore the world around them. They make careful observations to support identification, comparison and noticing change. They use appropriate senses, aided by equipment such as magnifying glasses or digital microscopes, to make their observations. - They begin to take measurements, initially by comparisons, then using non-standard units.	Making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers - Children make systematic and careful observations. - They use a range of equipment for measuring length, time, temperature and capacity. They use standard units for their measurements.	Taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate - Children select measuring equipment to give precise results e.g. ruler, tape measure, force meter with a suitable scale. - During an enquiry, they make decisions e.g. whether they need to: repeat readings (fair testing); increase sample size (pattern seeking); adjust observation period/ frequency (observing over time); or check secondary sources (research); to get accurate data.
Year 1 & 2	Year 3 & 4	Year 5 & 6
Engaging in practical enquiry to answer questions		
Performing simple tests - Children use practical resources to gather evidence to answer questions generated by themselves/teacher. They carry out: tests to classify; comparative tests; pattern seeking enquiries; and make observations over time. Identifying and classifying - Children use observations and testing to compare objects, materials and living things. They sort and group these things, identifying their own criteria for sorting. - They use simple secondary sources to name living things. They describe the characteristics they used to identify a living thing.	Setting up simple practical enquiries, comparative and fair tests - Children select from a range of practical resources to gather evidence to answer questions generated by themselves/or the teacher. - They follow their plan to carry out: observations and tests to classify; comparative and simple fair tests; observations over time; and pattern seeking. Explanatory note A comparative test is performed by changing a variable that is qualitative e.g. the type of material, shape of the parachute. This leads to a ranked outcome. A fair test is performed by changing a variable that is quantitative e.g. the thickness of the material or the area of the canopy. This leads to establishing a causative relationship.	Planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary Children select from a range of practical resources to gather evidence to answer their questions. They carry out fair tests, recognising and controlling variables. They decide what observations or measurements to make over time and for how long. They look for patterns and relationships using a suitable sample.

Year 1 & 2		Year 3 & 4		Year 5 & 6	
Recording an presenting evidence					
Gathering and recording data to help in answering questions • Children record their observations e.g. using photos, videos, drawings, labelled diagrams or in writing. • They record their measurements e.g. using prepared tables, pictograms, tally charts and block graphs. • They classify using simple prepared tables and sorting rings.		Gathering, recording, classifying and presenting data in a variety of ways to help in answering questions Recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, tables • Children sometimes decide how to record and present evidence e.g. using photos, videos, pictures, labelled diagrams or writing. They record their measurements e.g. using tables, tally charts and bar charts (given templates). They record classifications e.g. using tables, Venn and Carroll diagrams. • Children are supported to present the same data in different ways to help in answering the question.		Recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs • Children decide how to record and present evidence. They record observations e.g. using annotated photos, videos, labelled diagrams, observational drawings, labelled scientific diagrams or writing. They record measurements e.g. using tables, tally charts, bar charts, line graphs and scatter graphs. They record classifications e.g. using tables, Venn diagrams, Carroll diagrams and classification keys. •Children present the same data in different ways in order to help with answering the question.	
Year 1 & 2		Year 3 & 4		Year 5 & 6	
Answering questions and concluding					
Using their observations and ideas to suggest answers to questions • Children use their experiences of the world around them to suggest appropriate answers to questions. They are supported to relate these to their evidence e.g. observations they have made, measurements they have taken or information they have gained from secondary sources.		Using straightforward scientific evidence to answer questions or to support their findings. • Children answer their own and others’ questions based on observations they have made, measurements they have taken or information they have gained from secondary sources. The answers are consistent with the evidence.		Identifying scientific evidence that has been used to support or refute ideas or arguments • Children answer their own and others’ questions based on observations they have made, measurements they have taken or information they have gained from secondary sources. When doing this, they discuss whether other evidence e.g. from other groups, secondary sources and their scientific understanding, supports or refutes their answer. • They talk about how their scientific ideas change due to new evidence that they have gathered. • They talk about how new discoveries change scientific understanding.	

<i>Using their observations and ideas to suggest answers to questions</i> • Children recognise 'biggest and smallest', 'best and worst' etc. from their data.	Identifying differences, similarities or changes related to simple scientific ideas and processes • Children interpret their data to generate simple comparative statements based on their evidence. They begin to identify naturally occurring patterns and causal relationships. <i>Using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions</i> • They draw conclusions based on their evidence and current subject knowledge.	<i>Reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations</i> In their conclusions, children: identify causal relationships and patterns in the natural world from their evidence; identify results that do not fit the overall pattern; and explain their findings using their subject knowledge.
Year 1 & 2	Year 3 & 4	Year 5 & 6
Evaluating and raising further questions and predictions		
• Children ask simple questions and recognise that they can be answered in different ways • Children use their observations and ideas to suggest answers to questions	<i>Using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions</i> • Children identify ways in which they adapted their method as they progressed or how they would do it differently if they repeated the enquiry. <i>Using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions</i> • Children use their evidence to suggest values for different items tested using the same method e.g. the distance travelled by a car on an additional surface. • Following a scientific experience, the children ask further questions which can be answered by extending the same enquiry.	<i>Reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations</i> • Children evaluate, for example, the choice of method used, the control of variables, the precision and accuracy of measurements and the credibility of secondary sources used. • They identify any limitations that reduce the trust they have in their data. Using test results to make predictions to set up further comparative and fair tests • Children use the scientific knowledge gained from enquiry work to make predictions they can investigate using comparative and fair tests.

Year 1 & 2	Year 3 & 4	Year 5 & 6
Communicating their findings		
Children gather and record data to help in answering questions and to show their findings	Reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions Children communicate their findings to an audience both orally and in writing, using appropriate scientific vocabulary.	<i>Reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations</i> Children communicate their findings to an audience using relevant scientific language and illustrations.

Science – Animals including Humans

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Identify and name common animals that are pets, and mammals in the immediate environment. •Begin to look at changes during the life cycles. •Begin to name parts of the body and begin to identify different senses.	•Identify and name a variety of common animals that are birds, fish, amphibians, reptiles and mammals. •Identify and name a variety of common animals that are carnivores, herbivores and omnivores. •Describe and compare the structure of a variety of common animals (birds, fish, amphibians, reptiles and mammals, and including pets). •Identify, name, draw and label the basic parts of the human body and say which parts of the body is associated with each sense.	•Notice that animals, including humans, have offspring which grow into adults. •Find out about and describe the basic needs of animals, including humans, for survival (water, food and air). •Describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene.	•Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat. •Identify that humans and some animals have bones, skeletons and muscles for support, protection and movement.	•Describe the simple functions of the basic parts of the digestive system in humans. •Identify the different types of teeth in humans and their simple functions. •Construct and interpret a variety of food chains, identifying producers, predators and prey.	•Describe the changes as humans develop from birth to old age. •Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. (yr 5 – Living things and their habitats) •Describe the life process of reproduction in some plants and animals (yr 5 – Living things and their habitats)	•Identify and name the main parts of the human circulatory system, and explain the functions of the heart, blood vessels and blood. •Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function. •Describe the ways in which nutrients and water are transported within animals, including humans. • Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences , including micro-organisms, plants and animals (yr 6 – Living things and their habitats)	• Reproduction in humans (as an example of a mammal), including the structure and function of the male/female reproductive systems, menstrual cycle, gametes, fertilisation, gestation and birth, to include the effect of maternal lifestyle on the foetus through the placenta. • The consequences of imbalances in the diet, including obesity, starvation and deficiency diseases. • The effects of recreational drugs (substance misuse) on behaviour, health and life processes. • The structure and functions of the gas exchange system in humans, including

						•Give reasons for classifying plants and animals based on specific characteristics (yr 6 – Living things and their habitats)	adaptations to function. • The mechanism of breathing to move air in and out of the lungs. • The impact of exercise, asthma and smoking on the human gas exchange system.
--	--	--	--	--	--	--	--

Science – Evolution and Inheritance

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to understand that different living things existed before us.		•Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other (yr 2 Living things and their habitats)	•Describe in simple terms how fossils are formed when things that have lived are trapped within rock. (yr 3 Rocks)	•Recognise that environments can change and that this can sometimes pose dangers to living things (yr 4 Living things and their habitats)		•Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago. •Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents. •Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.	• Heredity as the process by which genetic information is transmitted from one generation to the next. • A simple model of chromosomes, genes and DNA in heredity, including the part played by Watson, Crick, Wilkins and Franklin in the development of the DNA model. • The variation between species and between individuals of the same species means some organisms compete more successfully, which can drive natural selection. • Changes in the environment may leave individuals within a species, and some entire species, less well adapted to compete successfully and reproduce, which in turn may lead to extinction.

Science – Plants

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to observe plants growing and changing. •Begin to identify basic parts of a plant.	•Identify and name a variety of common plants, including garden plants, wild plants and trees, and those classified as deciduous and evergreen. •Identify and describe the basic structure of a variety of common plants including roots, stem/trunk, leaves and flowers.	•Observe and describe how seeds and bulbs grow into mature plants. •Find out and describe how plants need water, light and a suitable temperature to grow and stay healthy. •Identify and name a variety of plants and animals in their habitats, including microhabitats (yr 2 – Living things and their habitats)	•Identify and describe the functions of different parts of plants; roots, stem, leaves and flowers. •Explore the requirements of plants for life and growth (air, light, water, nutrients from soil and room to grow) and how they vary from plant to plant. •Investigate the ways in which water is transported within plants. •Explore the role of flowers in the life cycle of flowering plants, including pollination, seed formation and seed dispersal.	•Recognise that living things can be grouped in a variety of ways (yr 4 Living things and their habitats) •Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment (yr 4 Living things and their habitats) •Recognise that environments can change and that this can sometimes pose dangers to living things (yr 4 Living things and their habitats)	•Describe the life process of reproduction in some plants and animals (yr 5 – Living things and their habitats)	•Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals (yr 6 – Living things and their habitats) •Give reasons for classifying plants and animals based on specific characteristics (yr 6 – Living things and their habitats)	• Reproduction in plants, including flower structure, wind and insect pollination, fertilisation, seed and fruit formation and dispersal, including quantitative investigation of some dispersal mechanisms.

Science – Materials

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to talk about a range of common materials in the environment. •Begin to identify if a material has been made or is a natural material. •Begin to select materials for a specific purpose. •Begin to test why a material is suitable for its use.	•Distinguish between an object and the material from which it is made. •Identify and name a variety of everyday materials, including wood, plastic, glass, water and rock. •Describe the simple physical properties of a variety of everyday materials. •Compare and group together a variety of everyday materials on the basis of their physical properties.	•Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. •Find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching.	• Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. (yr 3 Rocks) •Describe in simple terms how fossils are formed when things that have lived are trapped within rock (yr 3 Rocks) •Recognise that soils are made from rocks and organic matter. (yr 3 Rocks) •Notice that some forces need contact between two objects, but magnetic forces can act at a distance (yr 3 Forces and magnets)	•Compare and group materials together, according to whether they are solids, liquids or gases. •Observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C). •Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.	•Compare and group together everyday materials based on their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. •Understand that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution. •Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating. •Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic. •Demonstrate that		• Chemical reactions, the rearrangement of atoms. • Representing chemical reactions using formulae and using equations. • Combustion, thermal decomposition, oxidation and displacement reactions. • Defining acids and alkalis in terms of neutralisation reactions. • The pH scale for measuring acidity/alkalinity; and indicators.

					dissolving, mixing and changes of state are reversible changes. •Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda.		
--	--	--	--	--	--	--	--

Science - Rocks

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to identify natural materials.	•Distinguish between an object and the material from which it is made (yr 1 Everyday materials) •Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water and rock. (yr 1 Everyday materials) •Describe the simple physical properties of a variety of everyday materials (yr 1 Everyday materials) •Compare and group together a variety of everyday materials on the basis of their simple physical properties (yr 1 Everyday materials)	•Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. (yr 2 Uses of everyday materials)	• Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. •Describe in simple terms how fossils are formed when things that have lived are trapped within rock •Recognise that soils are made from rocks and organic matter.			•Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago (yr 6 Evolution and inheritance)	• The composition of the Earth. • The structure of the Earth. • The rock cycle and the formation of igneous, sedimentary and metamorphic rocks.

Science – Seasonal Change

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to name the four seasons. •Begin to identify the changes in our local environment as the seasons change.	•Observe changes across the four seasons. •Observe and describe weather associated with the seasons and how day length varies.		•Recognise that light from the sun can be dangerous and that there are ways to protect their eyes (yr 3 Light)		•Use the idea of the Earth's rotation to explain day and night and the apparent movement of the Sun across the sky (yr 5 Earth and space)		• The seasons and the Earth's tilt, day length at different times of year, in different hemispheres.

Science – Living Things and their Habitats

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to compare different habitats. •Begin to make observations of animals and plants and explain why some things occur and talk about changes. •Begin to understand that some animals hibernate.	•Identify and name a variety of common wild and garden plants , including deciduous and evergreen trees (yr 1 Plants) •Identify and describe the basic structure of a variety of common flowering plants, including trees (yr 1 Plants) •Identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals (yr 1 Animals including humans) •Identify and name a variety of common animals that are carnivores, herbivores and omnivores (yr 1 Animals including humans) •Describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including	•Explore and compare the differences between things that are living, dead, and things that have never been alive. •Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. •Identify and name a variety of plants and animals in their habitats, including micro – habitats. •Describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food. •Notice that animals, including humans, have offspring which	•Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation, and seed dispersal (yr 3 Plants)	•Recognise that living things can be grouped in a variety of ways. •Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. •Recognise that environments can change and that this can sometimes pose dangers to living things. •Construct and interpret a variety of food chains, identifying producers, predators and prey. (yr 4 Animals, including humans)	•Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. •Describe the life process of reproduction in some plants and animals.	•Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro - organisms, plants and animals. •Give reasons for classifying plants and animals based on specific characteristics.	• Reproduction in humans (as an example of a mammal), including the structure and function of the male and female reproductive systems, menstrual cycle, gametes, fertilisation, gestation and birth, to include the effect of maternal lifestyle on the foetus through the placenta. • Reproduction in plants, including flower structure, wind and insect pollination, fertilisation, seed and fruit formation and dispersal, including quantitative investigation of some dispersal mechanisms. • Differences between species.

	pets) (yr 1 Animals including humans) •Observe changes across the four seasons (yr 1 Seasonal change)	grow into adults (yr 2 Animals including humans)					
--	---	---	--	--	--	--	--

Science – Forces and Magnets

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to explore different forces.		•Find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching (yr 2 Use of everyday materials)	•Compare how things move on different surfaces. •Notice that some forces need contact between two objects, but magnetic forces can act at a distance. •Observe how magnets attract or repel each other and attract some materials and not others. •Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. •Describe magnets as having two poles. •Predict whether two magnets will attract or repel each other, depending on which poles are facing.		•Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object. •Identify the effects of air resistance, water resistance and friction that act between moving surfaces. •Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.		• Magnetic fields by plotting with compass, depiction by field lines. • Earth's magnetism, compass and navigation. • Forces as pushes or pulls, arising from the interaction between 2 objects. • Using force arrows in diagrams, adding forces in one dimension, balanced and unbalanced. • Moment as the turning effect of a force. • Forces: associated with deforming objects; stretching and squashing – springs; with rubbing and friction between surfaces, with pushing things out of the way; resistance to motion of air/water. • Forces measured in Newtons, measurements of stretch or compression as force.

Science – Earth and Space

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to name the four seasons. •Begin to identify the changes in our local environment as the seasons change. •Begin to recognise living on planet earth and how we can look after it.	•Observe changes across the four seasons (yr 1 Seasonal changes) •Observe and describe weather associated with the seasons and how day length varies (yr 1 Seasonal changes)				•Describe the movement of the Earth, and other planets, relative to the Sun in the solar system. •Describe the movement of the Moon relative to the Earth. •Describe the Sun, Earth and Moon as approximately spherical bodies. •Use the idea of the Earth's rotation to explain day and night and the apparent movement of the Sun across the sky.		• Gravity force, weight = mass x gravitational field strength (g), on Earth $g=10 \text{ N/kg}$, different on other planets and stars; gravity forces between Earth and Moon, and between Earth and Sun (qualitative only). • Our Sun as a star, other stars in our galaxy, other galaxies. • The seasons and the Earth's tilt, day length at different times of year, in different hemispheres. • The light year as a unit of astronomical distance.

Science – Light

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to recognise night and day.	•Observe changes across the four seasons. (yr 1 seasonal changes) •Observe and describe weather associated with the seasons and how day length varies. (yr 1 seasonal changes)		•Recognise that light is needed in order to see things and that dark is the absence of light. •Notice that light is reflected from surfaces. •Recognise that light from the sun can be dangerous and that there are ways to protect our eyes. •Recognise that shadows are formed when the light from a light source is blocked by a solid object. •Find patterns in the way that the sizes of shadows change.			•Recognise that light appears to travel in straight lines. •Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. •Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes. •Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.	• Similarities and differences between light waves and waves in matter. • Light waves travelling through a vacuum; speed of light. • Transmission of light through materials: diffuse, absorption, scattering, specular reflection at surface. • Use of ray model to explain imaging in mirrors, pinhole camera, refraction of light & action of convex lens in focusing; human eye. • Light transferring energy from source to absorber leading to chemical and electrical effects; photo-sensitive material in the retina and in cameras. • Colours - different frequencies of light, white light and prisms; differential colour effects in absorption and diffuse reflection.

Science – Sound

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to identify different sounds.	•Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense (yr 1 Animals, including humans)			•Identify how sounds are made, associating some of them with something vibrating. •Recognise that vibrations from a sound travel through a medium to the ear. •Find patterns between the pitch of a sound and features of the object that produced it. •Find patterns between the volume of a sound and the strength of the vibrations that produced it. •Recognise that sounds get fainter as the distance from the sound source increases.			• Waves on water as undulations which travel through water with transverse motion. • Frequencies of sound waves, measured in Hertz; echoes, reflection and absorption of sound. • Sound needing a medium to travel, the speed of sound in air, water, solids. • Sound produced by vibrations of objects, in loud speakers, detected by their effects on microphone diaphragm and ear drum; sound waves are longitudinal. • Auditory range of humans and animals. • Pressure waves transferring energy; use for cleaning and physiotherapy by ultra-sound. • Waves transferring information for conversion to electrical signals by microphone.

Science – Electricity

EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	KS3
•Begin to recognise living on planet earth and how we can look after it. •Begin to recognise that some objects use electricity.				•Identify common appliances that run on electricity. •Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. •Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. •Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. •Recognise some common conductors and insulators, and associate metals with being good conductors.		•Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit. •Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches. •Use recognised symbols when representing a simple circuit in a diagram.	• Electric current, measured in amperes, in circuits, series and parallel circuits, currents add where branches meet and current as flow of charge. • Potential difference, measured in volts, battery and bulb ratings; resistance, measured in ohms, as the ratio of potential difference (p.d.) to current. • Differences in resistance between conducting and insulating components (quantitative). • Static electricity.
